

Appl. No.: 10/829,570

Office action date: October 29, 2007

Amend. Date: November 13, 2007

Claim 1 (Currently amended) A method for notifying the recipient of an electronic message mail of a local action required to the contents of the electronic mail message comprising the steps of:

receiving an electronic message;

determining whether there is a local action required by recipient in response to the contents of the message;

determining whether recipient has performed an action in response to the contents of the message within; and

generating a message at the recipient location to remind the recipient to perform an action in response to the received message, when there is a determination that recipient has not performed an action in response to the received message within a determined period of time; and

transmitting an action completion message to the sender of the original electronic message notifying the sender of the completion of the local action by the recipient.

Claim 2 (Original) The method as described in claim 1 wherein said required action determination step further comprises detecting an action-required indicator in the received message.

Claim 3 (Original) The method as described in claim 2 wherein said indicator is a marker embedded in the received message.

Claim 4 (Original) The method as described in claim 1 further comprising before said message receiving step, the steps of: marking a created message at the message origination location to indicate that an action is required in response to that message; and transmitting that message to a recipient location.

Claim 5 (canceled)

Appl. No.: 10/829,570

Office action date: October 29, 2007

Amend. Date: November 13, 2007

Claim 6 (Original) The method as described in claim 4 wherein the message is marked to indicate that an action is required regardless of the type of required action.

Claim 7 (Original) The method as described in claim 2 wherein said indicator is a marker displayed in the received message.

Claim 8 (Original) The method as described in claim 4 further comprising after said local action determination step, the steps of: determining a priority for a received message requiring an action, the message priority being based on the characteristics of the type of action required in the message; and inserting the received message into a priority list of messages that required an action.

Claim 9 (Original) The method as described in claim 8 further comprising the step of removing a message from the priority list at the completion of an action in response to that message.

Claim 10 (Original) The method as described in claim 8 wherein said action performed determination step further comprises performing periodic checks of the message, the frequency of the checks being based on category of the message.

Appl. No.: 10/829,570

Office action date: October 29, 2007

Amend. Date: November 13, 2007

Claim 11 (Currently amended) A computer program product in a computer readable medium for notifying the recipient of an electronic message mail of a local action required to the contents of the electronic mail message comprising:

instructions ~~for~~ receiving an electronic message;

instructions ~~for~~ determining whether there is a local action required by recipient in response to the contents of the message;

instructions ~~for~~ determining whether recipient has performed an action in response to the contents of the message within; and

instructions generating a message at the recipient location to remind the recipient to perform an action in response to the received message, when there is a determination that recipient has not performed an action in response to the received message within a determined period of time; and

instructions for transmitting an action completion message to the sender of the original electronic message notifying the sender of the completion of the local action by the recipient.

Claim 12 (Currently amended) The computer program product as described in claim 11 wherein said required action determination instructions further comprise instructions ~~for~~ detecting an action required indicator in the received message.

Claim 13 (Currently amended) The computer program product as described in claim 11 further comprising before said message receiving instructions, instructions ~~for~~ marking a created message at the message origination location to indicate that an action is required in response to that message; and transmitting that message to a recipient location.

Claim 14 (Canceled)

Claim 15 (Currently amended) The computer program product as described in claim 12 further comprising instructions ~~for~~ displaying a marker indicating an action is required for the received message.

Appl. No.: 10/829,570

Office action date: October 29, 2007

Amend. Date: November 13, 2007

Claim 16 (Currently amended) The computer program product as described in claim 13 further comprising after said local action determination instructions, instructions for: determining a priority for a received message requiring an action, the message priority being based on the characteristics of the type of action required in the message; and inserting the received message into a priority list of messages that required an action.

Claim 17 (Currently amended) The computer program product as described in claim 16 further comprising the instructions for removing a message from the priority list at the completion of an action in response to that message.

Claim 18 (Currently amended) The computer program product as described in claim 17 wherein instructions for determining when an action is performed in response to message further comprises instructions for performing periodic checks of the message, the frequency of the checks being based on category of the message.

Claim 19 (New) A method for notifying the recipient of an electronic message mail of a local action required to the contents of the electronic mail message comprising the steps of:

receiving an electronic message;

determining whether there is a local action required by recipient in response to the contents of the message;

perform periodic message reply checks to determine whether recipient has performed an action in response to the contents of the message within; and

after a periodic check, generating a message at the recipient location to remind the recipient to perform an action in response to the received message, when there is a determination that recipient has not performed an action in response to the received message.

Appl. No.: 10/829,570
Office action date: October 29, 2007
Amend. Date: November 13, 2007

20 (New) The method as described in claim 19 further comprising after said determining local action requirement step, the step of identifying a set response time limit.

21 (New) The method as described in claim 20 further comprising after said periodic check step, and before said reminder message generating step, the step of determining whether the identified response time limit has expired.

22 (New) The method as described in claim 21 further comprising the step of sending a failure to respond notice to a sender of the received electronic message when there is a determination that the identified response time limit has expired.
